ENERGY
EVALUATION

- 1 Go to **www.quantumgeothermal.com**
- 2 On the home page, click on "Receive an **Energy Evaluation**"
- 3 Take a few minutes to complete and submit the evaluation form
- 4 Enter promo code **QG5** and qualify to save \$500
- 5 Make a decision and significantly reduce your heating cost

How It Works.

Energy in the ground is actually stored energy from the sun. At six feet (two metres) below the surface, the earth's temperature is a constant 50-55°F (10-12°C) all year round. This renewable energy is a steady heat source, even in the coldest winter.

Heating

In the winter, a geothermal system removed this heat from the earth. The system consists of a geothermal unit inside your home and a series of pipes buried underground on your property.

Cooling

In the summer the process is reversed - heat is removed from the house and deposited in the ground, with equal efficiency, using the same equipment. There is no outside AC unit.
